An Overview

The rest of this slide lies beyond the edge of the viewport. Nothing there flows onto a next slide: the viewport clips, and `pan` is what brings the rest of the canvas into view.

16. Item 16 of a list that is longer than one screenful.

The list ends here, at the line the last pan goes to.

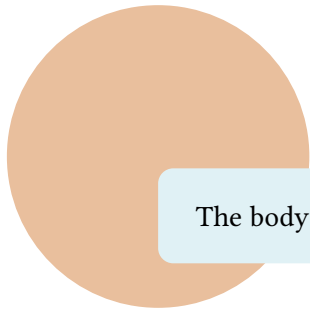

the end of the flow

Past the Edge

The viewport is not clamped to the canvas.

Layers Stay Put

A pan moves the canvas, which carries the body, between the background and the overlay.

The body travel

A logo in the overlay

This card is placed inside an indented block, and the explicit canvas makes room for it.
